Five things you need to know about Meadowmat low fertility soil

Wildflowers thrive in soil which is low in nutrients.

Most garden soil is naturally too rich for a successful wildflower meadow.

Our specially blended growing medium - Meadowmat Low Fertility Soil comes highly recommended for establishing wildflowers in gardens, parks, amenity areas and schools

Meadowmat Low Fertility Soil helps minimise competition from weeds and grasses,

It is tested to BS3882:2015 low fertility parameters.

It is supplied in 0.8m3 bags.

Each Bag will cover approximately 5m2 to a depth of 150mm
